Hello Johanna,

It's going to be really tough for me to make either of these rotations. That being said can we stay in touch and see how you are making out with others and how the situation is out there? mentioned we just bought/moved in to a new house and my wife started part time work for the

Personal Matters/Ex. 6

If deployments go beyond the first two I should be able to help. Dan

Team – On behalf of Craig, I am sending out a request for availability to deploy as a CISM Team member to the Gold King Mine Incident in Durango, CO. You would be supporting the area command and Region 8 incident command in Durango and would need to be able visit operations locations including some located at 10,000 ft elevation. You need to be current on field safety training (at a minimum the 24 hour on-line field safety training). Please respond back to Craig and I about availability ASAP for:

August 14th or 15th for a 10 day to 14 day rotation

Aug 26th-28th for a 10 to 14 day rotation (the need and dates of a future deployment to be determined by the first team and IC).

Thank you for your support. Johanna Miller

Subject: CISM Deployment request to Gold King Mine, Durango, CO

Request for CISM Presence at the Gold King Mine Site, Durango, CO

Per the request from the Incident Area Commander, David Ostrander, Region VII is requesting the EPA's CISM Team to deploy and provide CISM/PEER Support. The HQ CISM Coordinator and Region's VIII's CISM are currently formulating a CISM Response Team to deploy to the Incident Area Command Center in Durango, CO. The Team will provide CISM for Emergency Responders for stress related health concerns.

The HQ Coordinator will secure a two CISM Team to deploy to Durango, CO. The Deployment is scheduled for two weeks or less. If requested, a second CISM team will be created and deploy to the same location for an additional two weeks or shorter.

All CISM communications coordination will be conducted between the HQ Coordinator and Region VII's CISM Team Lead.

A general summary closeout report will be generated at the end of tour.
